

Intestinal Stent

Duodenal/Colonic Stents with TTS Placement

Indication:

Tumor and stenosis on upper gastrointestinal tract of middle gastrointestinal tract

Performance Characteristics:

- Self-expandable and high radial force
- Reinforced metal tube for fluent release
- Ball ends for excellent positional stability
- Release under endoscopic observation with high radiopacity

Specifications:

Wire Dia (mm)	Middle/Ends Dia (mm)	Length (mm)	Covering	Product Illustration	Introducer System
0.18/0.20	18/24	60/80/100/120	Uncovered		10Fr*2300mm
	20/26				
	22/28				
	25/30				

Covered Duodenal/Colonic Stents with non-TTS Placement

Indication:

Tumor or fistula in gastrointestinal tract

Performance Characteristics:

- Self-expandable and high radial force
- Reinforced metal tube for fluent release
- Ball ends for excellent positional stability
- Release with high radiopacity

Specifications:

Wire Dia (mm)	Middle/Ends Dia (mm)	Length (mm)	Covering	Product Illustration	Introducer System
0.18/0.26	18/24	60/80/100/120	Partially covered/Fully covered		18Fr*140mm 24Fr*700mm
	20/26				
	22/28				
	25/30				

Colonic/Rectal Stents

Indication:

Tumor and stenosis on lower gastrointestinal tract

Performance Characteristics:

- Self-expandable and high radial force
- Reinforced metal tube for fluent release
- Ball ends for excellent positional stability
- Release with high radiopacity

Specifications:

Wire Dia (mm)	Middle/Ends Dia (mm)	Length (mm)	Covering	Product Illustration	Introducer System
0.26	25/30	60/80/100/120	Uncovered/Partially covered/Fully covered		24Fr*700mm
	28/34				
	30/36
